VERTICUT-GAGE™

The VERTICUT-GAGE is a precision measuring instrument for accurately setting the desired depth on verticutter units.

ADJUSTMENT BRACKET FOR
CENTERING INDICATOR BLOCK

CUSTOM EXTRUDED ALUMINUM .330
THICK AND HARDENED SURFACE INSURES
RIGIDITY AND LONG WEAR

HOW IT WORKS

First, the VERTICUT-GAGE™ needs to be "Zeroed" out. Set the VERTICUT-GAGE™ on a BENCH-PLATE or other suitable flat surface. Press the "zero" button on the face of the gage. The VERTICUT-GAGE™ is now ready to use.

To use, set the bar on the front and rear rollers and rotate the blades against the spring loaded indicator block. When the high point is noted, that is the depth of the verticutters. Repeat this process on both sides of the unit as adjustments are made. Make depth (or height) adjustments as desired.

FEATURES OF THE VERTICUT-GAGE™

Adjustments can be made with the gage on the mower. Simply read the gage while turning the adjusting knob.

- Both above grade and below grade measurements are possible.
- Adjustment bracket for centering the indicator block.
- Gage reads toward user for easy adjusting.
- Fits most verticutter units.
